

## PH250 - PH REMEDIATION

Effective storm water management on construction projects involves purifying sediment contaminated water before discharging into natural waterways.

The pH Unit works by releasing the liquified form of treatment chemistry (CO<sub>2</sub>) inline with water coming into the system. Each unit can be stand alone for pH adjustment or be used in combination with additional equipment.

### FEATURES

- Carbon steel housing.
- Steel piping.
- 45 psi maximum operating pressure.
- Auto shutdown.
- Flow sensor.
- Rigid industrial enclosure.
- UL approved components.
- Camlock fitting to connect pump with flocculant source.
- Easily adjustable to accommodate changes in flow rate.

### MATERIAL SPECIFICATIONS

MODEL	PH250
FLOW RATE	60 GPM
DIMENSIONS	4'L x 2'W x 2'6"H
DRY WEIGHT	150 LBS
TURBIDITY AVAILABLE	NO
TELEMETRY	NO
INJECTION	SINGLE
POWER REQUIREMENTS	120V/20A BREAKER
